

Smarter systems. Lighter footprint.

Our approach to carbon reduction begins with a simple question: can we deliver the same or better support with less waste?

LEAN BY DESIGN

Reuse / Remote / Optimise / Measure

WHERE OUR DELIVERY MODEL CAN MAKE A DIFFERENCE

Reuse before rebuilding

Adapt established tools, approved content and suitable infrastructure across independently licensed platforms.

Accessible, remote-first support

Use digital appointments, resources and training where appropriate; retain in-person choices where needed.

Smarter journeys and venues

Group coaching visits by locality, compare travel and room options and avoid unnecessary repeat trips.

Proportionate digital operations

Monitor hosting, storage and AI use; minimise waste without compromising service quality or accessibility.

Design ambition - not a claim of quantified emissions savings.

Our carbon reduction policy

Lean thinking translated into responsible day-to-day decisions.

OUR COMMITMENT

Living Well Partners aims to prevent avoidable emissions through thoughtful service design, efficient operations, reuse of suitable resources and measurable improvement. We will prioritise reduction over unsubstantiated claims.

01

Reduce unnecessary journeys

Prioritise remote and hybrid working where suitable, with in-person contact based on client need.

02

Plan local delivery efficiently

Cluster appointments in four-week local schedules and compare coach travel, room and venue options.

03

Reuse and procure responsibly

Reuse approved content, existing infrastructure and durable equipment; reduce disposable materials.

04

Manage our digital footprint

Review hosting, storage, AI and speech use; seek supplier sustainability information where available.

MEASURE / IMPROVE / REPORT

01

Set the baseline

Map relevant Scope 1, 2 and 3 emissions.

02

Track activity

Record travel, energy, cloud and procurement data.

03

Review annually

Use UK reporting factors; update measures and progress.

Reporting status: This is a policy overview, not a measured Carbon Reduction Plan (CRP). No audited baseline or quantified savings are claimed. Where tender rules require a formal CRP, separate emissions data, targets and appropriate approvals will be needed.

Evidence framework: [UK GHG conversion factors 2026](#) [NHS supplier guidance for April 2027](#)
